Subject: RE: PRFA for FWS for Lindsey Lake Spill

Hi, Allison, I'm covering for Richard for a few days.

We would really appreciate your expertise and any advice that can be given to conduct the product recovery in the most environmentally sensitive way possible. We have known salmon habitat within the operational area and evidence of river otter populations have been observed. After speaking with Richard and DEQ, we think the SOW for F&W would be:

- Observe operations during recovery of product in Lindsey Lake and Lindsey Creek and provide recommendations for appropriate protections to potentially affected wildlife including salmon, river otters, and any other observed or potentially impacted species.
- Make recommendations regarding the need to form SCAT for immediate and longer-term cleanup. (Of course, no PRFA funds can be used to perform any NRDA.)
- Anticipated time on site is 1-4 days, approximately 80 hours, depending on observations and recommendations from F&W once they're on site.
- Responders will need to bring personal equipment, including PFDs. Boat access will be provided.
- Deploy ASAP.

Please feel free to add other SOW bullets you think might be required and provide a cost estimate so that EPA can include this sum in our request for funding to the Coast Guard.

Thanks,

Subject: PRFA for FWS for Lindsey Lake Spill

Hi Don,

I heard from Mike that you have requested FWS support for the subject incident. I just spoke with Richard Franklin and we will need some additional information regarding specific tasks, etc.

Do we need a resource request for Mike?

Have a great day!

Allison
